# SUMMER INSTITUTE

**THREE DAY INSTITUTE**
July 22nd through July 24th

**LIMITED APPLICATIONS**
Only 40 Available

# TECH-KNOW-MADIC

# LEARNING

## Learn How to Create, Curate & Facilitate
## digital learning environments

The new challenge for education is in information consumption as literacy is redefined through connected learning experiences and in ways that students access the vast warehouses of digital content. The Summer Institute of Tech-Know-Madic Learning will provide ways to face these challenges, and establish methods on how to stay ahead of the ever changing digital learning environments.

The 2013 Summer Institute of Tech-Know-Madic (TKM) Learning is designed for those who are pursuing the most recent developments in 21st Century education. The three day institute, sponsored by Dodge City Community College (DC3) will provide participants with a guide for teaching digital literacy in a connected learning environment.

The July 22 through 24 Summer Institute of TKM Learning will offer participants with ideas on how to construct student centered learning environments through the use of facilitated instruction.

Accepted participants will gain knowledge on methodologies on how to create, publish and push out digital content for project, and problem based units of learning. Participants will also be given an assortment of activity guides that correlate with the three domains of digital media literacy. These activity guides are designed to help teachers in their quest for integrating technology tools while blending the standards of required learning as applied to real world learning tasks.

The summer institute will include the principles of facilitated instruction as it applies to teachers as designers of learning as a digital compilation while defining best practices in learning analytics.
